DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-2, 7-15, 19-28 and 32 are rejected under 35 U.S.C. 102(e) as being anticipated by Clark et al. (US 6,319,075).

Clark et al. discloses a multi-beam power contact [figures 1-2] comprising:

- a main body having a connector interface edge and a mounting edge;
- the contact comprises two pairs of beams [18, 20] reads on applicant's a plurality of at least three beams extending from the connector interface edge of the main body;
- the beams comprises contact areas [26];
- at least two beams have different normal forces due the different sizes of the beams [figure 1];
- the beam are formed integral with the main body;

Art Unit: 2839

- the beams are aligned in a common plane and separated by a slot [figures 1-2] and have different widths at a point of intersection with the connector interface edge;
- at least one beam has a length greater than a length of an adjacent beam; and
- a beam closest to the mounting edge is longer than any other beam.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Clark et al. in view of Weber (4,818,237).

Clark et al. discloses the instant claimed invention as described above except for the contact comprises at least eight beams. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the contact with at least eight beams in order to handle a larger current flows through, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.

Allowable Subject Matter

5. Claims 33-37 are allowed.
6. Claims 4-6, 16-18 and 29-31 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not teach or render obvious the combination, cooperation and interaction that applicant claimed a power contact having at least one of beam pairs being an initial contact beam pair and at least one of the beams pairs being a non-initial contact beam pair, as recited with other elements in the claims 1, 13, 25 and 33.
